CAREER OBJECTIVE

Detail-oriented **Data Analyst** (Fresher) with a strong foundation in SQL, Python, and relational database design. Demonstrated ability to model complex data, write T-SQL stored procedures, and translate data structures into actionable insights. Seeking an entry-level Data Analyst role where I can apply analytical skills and a data-first mindset to drive business decisions.

TECHNICAL SKILLS

Languages & Querying: Python (pandas, NumPy, Matplotlib, Seaborn) | SQL / T-SQL | C# | JavaScript (ES6+)
Databases: SQL Server | Relational Schema Design (3NF) | Stored Procedures | Entity Framework | Database Normalization
Data Analysis & Reporting: Data Cleaning | Exploratory Data Analysis (EDA) | Data Visualization | Excel (PivotTables, VLOOKUP, Charts)
BI & Tools: Power BI | Tableau (basics) | Git | GitHub | Visual Studio | VS Code

EDUCATION

Master of Computer Applications (MCA) — Pursuing *2025 – 2027*
D.Y. Patil College of Engineering & Technology, Ambi, Pune

Bachelor of Computer Applications (BCA) *2022 – 2025*
Vivekanand College, Kolhapur, Maharashtra

12th (HSC) — 69.33% | 10th (SSC) — 87.00% *2022 / 2020*
Shri Ram High School & Jr. College, Kuditre, Kolhapur

PROJECTS

Gym Management System — Data-Driven Full Stack Application
Stack: SQL Server · T-SQL · ASP.NET MVC (C#) · Entity Framework · Python · JavaScript · Bootstrap 5
GitHub: github.com/sourabhk-tech/GymManagementSystem | Jan 2025 – May 2025

- **Designed a fully normalised relational database schema (3NF)** across Members, Memberships, Payments, and Trainers entities — establishing referential integrity, composite keys, and indexing strategies to optimise query performance across 4 interconnected tables.
- **Developed 8+ T-SQL stored procedures** for critical analytical operations including membership expiry tracking, fee payment status aggregation, and trainer utilisation reporting — reducing ad-hoc query time by standardising reusable data logic.
- **Performed exploratory data analysis (EDA)** on member registration and payment trends using Python (pandas); identified peak enrolment periods and fee collection patterns to surface actionable operational insights.
- **Built RESTful API endpoints** (ASP.NET Web API) to expose structured data to the presentation layer, ensuring clean separation of data logic; integrated role-based access control (Admin / Staff) to enforce data security.
- **Implemented client-side and server-side data validation** to maintain data integrity at point of entry, reducing erroneous records in the database by enforcing business rules at both layers.

CERTIFICATIONS & TRAINING

Deloitte Australia Data Analytics Job Simulation — Forage *2024*
Completed hands-on simulation covering data forensics, data cleaning, chart interpretation, and client-facing business analytics reporting.
